ORGANIC VOLATILE IMPURITIES (OVI) STATEMENT - DCP

ICL Performance Products does not use organic solvents in the manufacture, processing, packaging or cleaning procedures associated with Dicalcium Phosphate, Anhydrous (DCP/A) or Dihydrate (DCP/D). This includes the following solvents classified as Organic Volatile Impurities by the US Pharmacopoeia:

Benzene	Chloroform	1,4-Dioxane
Methylene Chloride	Trichloroethylene	Ethylene Oxide

ICL Performance Products does not test for these substances, however, since they are not used at any point in the processes, there should be none in the final products. Because there does not appear to be a source of potential contamination, ICL Performance Products is exempt from doing this testing on the final product, according to the current USP. If at any time we were to change our manufacturing procedure to include the use of these solvents, we would notify all regular customers.

These products are packaged in plastic lined Kraft paper bags. After palletizing, the material is covered with a protective over wrap and stored in clean, dry warehouses at ambient temperatures.
